# WASCON 2009

<http://www.iscowa.org/wascon2009>

3-4-5 June 2009 in Lyon - France

## *Sustainable Management of waste and recycled materials in construction*

### Topics

- Quantification and modeling of emissions (including Regulated Dangerous Substances in construction products and implications for water quality management in urban areas)
- New products or process development for reuse of wastes in construction
- New scenarios or new waste flows (e.g. sediments)
  
- Ecological impacts and health impacts
- Avoided impacts (raw material depletion, GHG emissions, energy-intensive products)
  
- Economy of recycling
- Industrial Ecology – waste recycling and territorial metabolism
- Multicriteria analysis and decision making tools (Life Cycle Analysis, Material Flow Analysis, Cost Benefit Analysis,...)
- Barriers and incentives to waste recycling (regulations, market, eco-taxation, conflict of interest between different industrial sectors, status and specifications of the recycled materials, social acceptance, producer liability)

**Deadline for abstracts submission 1st November 2008**
